Independent Update - March, 2012
SLIDE SET I
Natural Infectious Disease Declines Preceding Public Artificial Immunization Efforts

Slides one (1) through ten (10) graphically illustrate that in North America, Europe, and the South Pacific, major declines in life-threatening infectious diseases occurred historically either without, or far in advance of mass artificial immunization efforts for specific diseases as listed. This provides irrefutable evidence that vaccines are not necessary for the effective elimination of a wide range of infectious diseases!
England & Wales
Mean Annual Measles Mortality
Cases Children under 15 (1850-1965)

England

Scurvy & Measles - Parallel Mortality Rates per 100,000 (1919-1967)

Canada
Tuberculosis Mortality
Rates per 100,000 (1880-1960)

BCG Vaccination
Introduced Between
1948-1954 (Depending on
Prov. or Terr.)

United States
Tuberculosis Mortality
Rates per 100,000 Infants (1900-1960)

No Vaccination for Tuberculosis
Adopted in the USA

Source: John H. Dingle; Life and Death in Medicine; Scientific American; 1973; p. 56.
New Zealand Tuberculosis Mortality Rates Per Million (1880-1960)

BCG Vaccination Introduced

Source: Director General Annual Mortality Reports Covering 1872-1960, New Zealand Parliamentary Journals for the Years Specified.
United States
Mean Annual Pertussis Mortality
Rates Per 100,000 (1918-1960)

Source: Data derived from: Vital Statistics of the United States 1937-1960; and
Statistics and Health and Medical Care, pp. 44-86H.
England & Wales
Mean Annual Pertussis Mortality Cases Children under 15 (1850-1965)

Source: Thomas McKeown, The Role of Medicine: Dream, Mirage or Nemesis?; Basil Blackwell; Oxford, UK; 1979; p. 103
England
Scurvy & Pertussis - Parallel Mortality Rates per 100,000 (1919-1967)

United States
Mean Annual Scarlet Fever Mortality Rates per 100,000 (1910-1958)

No Vaccination for Scarlet Fever Adopted in the U.S.

United States
Annual Influenza Mortality Rates per 100,000 (1933-1965)

Influenza vaccination first widely administered in the U.S. in the late 1980s.

Slide eleven (11) graphically illustrates that when Flu-like illnesses occur, 90% of the time it is not the Flu. This means that even if popularized flu vaccines were actually effective, 90% of recipients would remain unprotected from the multiple viruses associated with Flu-like respiratory infections.
Flu-Like Acute Respiratory Infections

- Rhinovirus 55%
- Coronaviruses 23%
- Influenza A & B 10%
- Respiratory syncytial virus 6%
- Other pathogens 6%

Slides twelve (12) through nineteen (19) graphically illustrate that artificial immunization is not by any means a proven and foolproof measure for protection from various infectious disease conditions. It is often inconsequential epidemiologically, and in some cases it is shown to actually worsen health outcomes.
Children Under 2 Yrs of Age
Inactivated Influenza Vaccine

0%
Effective

Source: Cochrane Collaboration Database of Systematic Reviews, (John Wiley & Sons, Ltd.) 2006 (1) Article No. CD004879 – Covers 51 Studies on 260,000 children
Elderly Living in Communities & Group Homes

Inactivated Influenza Vaccine

Little or No Effectiveness

Source: Cochrane Collaboration Database of Systematic Reviews, (John Wiley & Sons, Ltd.) 2006 (3) Article No. CD004876 – Covers 64 Studies, over 40 years of influenza vaccination and see: http://www.bmj.com/cgi/content/full/333/7574/912
BCG for Tuberculosis

Note: Tuberculosis higher among two (2) dose Vaccinated versus Placebo Group

0%
Effective

BCG for Tuberculosis

Note: In years 0-2.5 the vaccinated had double the incidence of Tuberculosis versus Placebo Group

Source: Double blind randomized controlled trial of BCG’s effectiveness on 250,000 subjects Tuberculosis Research Centre (ICMR), Chennai, India: Indian Journal of Medical Research, 110, August 1999, pp. 56-69.
Mumps Outbreak in Highly Vaccinated Population

Measles Outbreak in Highly Vaccinated Population

1985 Texas

99% Vaccinated

1% Unvaccinated

This concluding slide set graphically illustrate that increases in mandated vaccine doses correlate with significant increases in both infant mortality and death rates for children under the age of five (5). The practice of artificial immunization is also linked to sudden infant death syndrome; various degenerative diseases, including diabetes; and appears to cause general immune system impairment in infants and children. Evidence also points to the practice as a principal factor in the recent massive increases in neurodegenerative conditions such as autism in children.
Under Age 5 Mortality statistics: http://www.who.int/whosis/whostat/EN_WHS09_Table1.pdf
COUNTRIES & NUMBER OF VACCINES
Mandated up to Age One
INFANT MORTALITY RATES - 2009

Under Age 1 Death Rates per 1,000 Live Births

Mortality Increase Trendline

Sweden - 12
Japan - 12
Iceland - 12
Germany - 18
Switzerland - 18
Australia - 24
Canada - 24
United States - 26
Under Age 5 Influenza Deaths Before & After U.S. CDC Mandates Flu Vaccines in Early Childhood

Influenza Deaths Children Under Age 5

2/3 of 103 infants had been vaccinated with pertussis prior to death, of which 6.5% died within 12 hours; 13% within 24 hours; 26% within 3 days; 37%, 61% & 70% within 1, 2, & 3 weeks respectively. Source: Torch W., Neurology - 32 (4 – Pt. 2) A, 1982, pp. 169-170.
Measles Vaccine & Inflammatory Bowel Diseases

Average Incidence First Five (5) years of Life
Nederlands Vereniging Kritisch Prikken 2004 Survey Findings

**Average Incidence N = 543**

- **Fever >40°**
- **Ear Infections**
- **Inflammation of the Throat**
- **Aggressive Behaviour Events**
- **Convulsions/Collapse**
- **Antibiotics Administered**

**Fully Vaccinated**

**No Vaccinations**
Absolute Incidence N=543
Nederlands Vereniging Kritisch Prikken 2004 Survey Findings

- Baby Cries Often
- Sickly
- Eczema
- Asthma/Chronic Lung Disease
- Allergic Reactions
- Aggressive Behaviour
- Difficulty Sleeping

Absolute Incidence (Non-Vaccinated in Relation to Vaccinated to N = 312 Per Group)
BCG Mandated in Schools & Diabetes Rates

Iceland
Luxembourg
Spain, Catalonia
Belgium
Netherlands
Spain, Madrid
England
N. Ireland
Scotland
Denmark
Norway
